AF 4 SERIES WATER SEPARATORS

In compressed air systems, liquid water that is formed from cooling and pressure effects, proceed in compressed air line as droplets. If precautions are not taken, it causes serious problems such as rusting in pneumatic systems, air leakages and valve jams.

In order to avoid problems like these, compressed air and liquid water should be separated from each other with the AF-04 series water separators.

OTA-01 TIMED DRAIN

Timed drain with adjustable waiting and discharging times

OTA-02 TIMED DRAIN

Automatic mini float condensate drain.

ZEROMAT

Smart magnetic sensor auto drain with zero compressed air loss.
